Meeting:  
Trust Board Public Meeting  

Date:  
3 June 2015  

Title of Paper:  
Commissioning for Quality and Innovation (CQUIN) Achievement 2014/15 & Overview 2015/16  

Key Issues:  
This paper provides the Board with an update on financial and service achievement against the CQUIN scheme for 2014/15. It also provides an overview of the proposed scheme for 2015/16.

Significant achievements have been made in the following areas:
- Maintained results below 3% prevalence of new pressure ulcers, one of the lowest results both regionally and nationally.
- Full, and early, implementation of the Staff Friends and Family test and the Patient Friends and Family Test (FFT) across the Trust.
- Delivered non-pharmacological pain management training to community hospital staff.
- Collected 946 Health Improvement Profiles (HIP) for patients admitted to mental health adult inpatient units with an average of 97% offered to patients within 7 days of admission/transfer.
- Full implementation of Trust-wide patient experience surveys, with results of 93% and higher for the FFT and the 3 ‘core’ question areas of ‘feeling involved’, ‘communication/ quality of information’ and ‘staff are friendly and helpful’.
- The Trust held a large consultation event at the KC stadium in October around the Recovery College and continues to build on the findings from the event.
- Improvement in communication with GPs in Forensic services.
- Provision of education training packages for patients and qualified staff around collaborative risk assessment and management in Forensic services.
- Developing a carer engagement strategy in Forensic services.
- Embedding, and routinely using, the clinical dashboards in Forensic services.

Further improvements need to be made in the following areas:
- Although high satisfaction results were achieved in many teams for the FFT and the ‘core’ questions, results of 85%/88% were reported in some teams. Those teams will be supported to action plan and improve as part of the new Patient Experience (PE) CQUIN for 15/16.
- Training for joint working fell behind on the Transformation of Neighbourhood Care Services CQUIN putting achievement at risk. This was as a result of winter pressures, leave and staff capacity in quarter 3 and early quarter 4. The lead attended a meeting with the Clinical Commissioning Group (CCG) to offer assurance and to share a recovery plan and quarter 4 saw a sharp rise in training courses held.
- Recording physical health information in inpatient units was poor for the National Serious Mental Health Index (SMI) CQUIN resulting in a loss of over £149,000. This remains a CQUIN for 15/16.

The total available was £2.74 million. The Trust had made significant progress during the first part of the year but has lost money relating to the National Serious Mental Health Index (SMI) CQUIN resulting in 88% achievement, £2.4 million (*to be confirmed*). Our consistent 89% achievement level has fallen slightly.

Links to Strategic Objectives:
- Provide services that are safe, person centred, delivered in appropriate environments and
sensitive to the needs of the individual
- Retain the confidence of patients, carers and commissioners by upholding the principles of the NHS
- Be an excellent employer maximising the skills and talents of our valued workforce
- Ensure a firm financial foundation underpins the delivery of our vision
- Through the use of evidence based practice, provide high quality services to establish a reputation for exceptional standards of care
- Provide and develop services that are efficient, cost effective and responsive to the needs of the people who use them

**Risk Issues:** (Financial, Clinical, Governance etc)

- A number of highly complex and challenging CQUINs have been agreed for 2015/16 which are in addition to a number of additional challenges and priorities in the respective teams for the coming year. We intend to increase the amount of support and guidance offered to the CQUIN leads during 2015/16 with fortnightly monitoring meetings for some leads until the CQUIN processes are fully embedded.

- A significant increase in paperwork was experienced during 2014/15 relating to the implementation of the National Staff/Patients Friends and Family test CQUIN. As the FFT is no longer a CQUIN for 15/16, but continues to be a contractual requirement, the CQUIN team will continue to manage FFT and the associated paperwork as part of their portfolio.

- The scheme for Mental Health (MH)/Community Services (CS) has been approved in principle and includes 1 large, 2 part, CQUIN (SMI) which is shared with Forensic services. This CQUIN is the biggest risk for achievement as it involves carrying out physical health checks in inpatient and Early Intervention in Psychosis (EIP) teams which includes carrying out 2 blood tests. There is a financial cost linked to CQUIN delivery which is explored further in a separate report, the CQUIN is worth £677k for 15/16.

**Recommendations:**

The Board is asked to:
- Note the lower achievement and risks for the 2015/16 scheme.
- Approve the CQUIN scheme for 2015/16.

**Authors of Report:**

Alison Flack, Care Group Director  
Mike Cheeseman, Head of Service  
Shelley Norton, CQUIN Lead/Senior Quality & Innovation Officer  
Alan Tate, Performance Contracts Manager
CQUIN – Commissioning for Quality and Innovation
2014/15 Achievement & 2015/16 Scheme Overview

Financial Achievement 2014/15

- Mental Health & Community Services - £2.08 million of £2.38 million = 87%
- Forensic - £314k of £333k = 94%
- Total £2.39 million of £2.71 million available (88%)
  (Values Rounded)

Mental Health & Community Services Achievement 2014/15

National Safety Thermometer (Specific Teams – Community and Mental Health)

- The National Safety Thermometer has been running since June 2012 and will continue during 15/16 as part of the standard contract, rather than continuing as a CQUIN in the new scheme.
- During 2013/14 a 40% reduction in new pressure ulcers was reported over the year, leaving us ranked as one of the lowest regionally and one of the lowest nationally.
- As a result of the very low numbers reported in 2013/14, the CQUIN this year (14/15) was to maintain that low performance for a further 12 months. We have achieved this successfully up to March 2015, reporting less than 3% pressure ulcer prevalence against the 3.16% target.
- We have collected harm data for 8,534 patients since April 2014 with only 261 pressure ulcers reported (many are inherited) this equates to 2.83% pressure ulcer prevalence for the Trust.

Friends and Family Test (Trust-wide)

- Implementation of the Staff Friends and Family test by April 2014 for Quarter 1, 2 and 4. Implementation of the Patient Friends and Family test by October, for an early implementation bonus, or by January 2015 for the one-off implementation payment.
- We have met both deadlines, including the early implementation of the Patient FFT by October, and have received full payment including the bonus payment for early implementation.
- We have distributed 102,830 survey cards to 157 teams, to last them until the end of March 2015.
- At the end of quarter 3 we had received 1,667 surveys back with an average of 93% reported for the FFT question.
- We now submit our data through UNIFY (from Feb 2015).
- The FFT is now moving away from the CQUIN scheme and will form part of the standard contract. Unfortunately this now means we will no longer receive an incentive payment for implementation of the FFT despite the high costs associated with delivering the FFT across the Trust.
Serious Mental Health Index (SMI) – Improving Physical Healthcare (Mental Health)

- 1 audit on physical health elements collected and reported to GPs. This is captured and reported on our IDL’s (Interim Discharge Letters). We have had to alter the content of the IDL template, following the first audit, to ensure compliance with future audits. We have added employment, accommodation and lifestyle support, the majority of which is covered in the Recovery Star assessments.
- 1 audit on physical health elements collected and the associated actions by staff (ie referral for weight management or smoking cessation). This information is routinely collected through the HIP (Health Improvement Profile – another CQUIN for 14/15).
- This CQUIN is primarily ‘in-house’ audits although some elements are reported to Royal College of Psychiatry (RCP) who liaise with NHS England and report back to us.
- The audit outcome for physical health information saw the Trust achieve poor results of 21.8% and lost £102k (100% of the money available), analysis of the audit report is underway to determine areas for improvement as this remains a CQUIN for 2015/16.

Deteriorating Patients – Pain Management (Community Hospitals)

- Establish the level of training and understanding of the use of ‘pain’ tools and non-pharmacological pain management techniques by staff in the 3 community hospitals. Only 44% of staff said they had understanding of non-pharmacological pain management techniques and 67% had used these techniques before. Training in quarter 3 and quarter 4 will improve the skill level.
- Ratification of the various pain tools available, agree the use of 1 pain tool and provide training on chosen tool and non-pharmacological pain management techniques to staff.
- Commenced pain management data collection as part of Nursing Dashboard in December although issues with the questions on survey monkey meant the survey did not display all of the questions when staff were collecting information. Quarter 4 saw the majority of money lost for this CQUIN due to technical issues which were not managed adequately by the CQUIN lead, within the quarter, to allow a baseline to be reported for the submission deadline.

Health Improvement Profile (HIP) (Mental Health)

- Continue to collect HIP information for all admissions/transfers in Hawthorne Court, Avondale, Newbridges and Westlands, implement HIP on 2 new wards (St Andrews and Millview Court).
- Provide Health Improvement Profile training to all new adult inpatient staff, provide evaluations for training delivered.
- We have collected 946 Health Improvement Profiles and achieved an offer rate of 97% (on average) within 7 days of admission/transfer to the unit. Some patients are too unsettled to be offered a Health Improvement Profile on admission/transfer and these exceptions are acceptable to Clinical Commissioning Group (CCG) for full payment.
- We will continue to work on the content of the Health Improvement Profile during 15/16 with more emphasis on the content of the HIP and sharing this information with primary care professionals.
Patient Experience (Trust-wide)

- This CQUIN ran alongside the FFT implementation CQUIN.
- We created a freepost survey card, holding the FFT question and a comment box, but also asking other questions relevant to the patient journey and asking ‘what did we do well’ and ‘what could we do better’.
- We added 3 ‘core’ questions to each of the 9 survey cards, asking about ‘feeling involved’, ‘quality of information/communication’ and ‘staff being friendly and helpful’. These questions are comparable across all service areas regardless of the patient journey.
- The first 6 months of data (from October) has reported very high satisfaction results for the majority of question areas although we are now action planning for change and improvement in specific teams and will share this information on our planned ‘You Said, We Did’ feedback boards.
- During 15/16 we are planning workshops, by service area, to encourage more ownership/involvement in change/improvement and action planning at a team level, supported by the Patient Experience lead. This will continue to be a CQUIN in 15/16.

Recovery College (Mental Health)

- Hold a stakeholder event and report findings to inform future development of the Recovery College.
- Trial Recovery College courses and feedback, ready to implement across the patch in the future.
- The development of the Recovery College will continue as a CQUIN in 15/16 with the emphasis on working with volunteers, 3rd sector, patients and carers. Offering training and support to allow these people/organisations to deliver training to patients across the Humber area, thus growing the Recovery College portfolio.

Transformation of Neighbourhood Care Teams (Community Teams – Physical Health District Nursing and Older Mental Health)

- Establish joint working standards and develop training to ‘skill up’ both sides of the workforce.
- Develop and hold joint multi-disciplinary team (MDT) meetings to discuss physical and mental health for shared patients.
- There have been 272 patients discussed at the new joint MDTs of 1,350 shared patients, quarter 4 reported 29% of shared patients discussed by both teams in the month.
- Training continues in Falls, General Practitioner Assessment of Cognition (GP COG), Basic Physical Health Clinical Skills, Wound Care and National Early Warning Score (NEWS), with over 350 staff trained so far. There have been issues with training, including staff leave, sickness, maternity and capacity issues related to winter pressures and safer staffing levels on wards. The Trust prioritised mandatory training and CQUIN training and asked staff to ensure they attended these courses as a minimum.
Pressure Ulcer Improvement (Community Teams)

- Develop standards for reporting pressure ulcers, grading and assessment. Develop regular action planning against root cause analysis themes and trends (root cause analysis of pressure ulcers at grades 3 and 4).
- Develop Quality of Care Standards for reporting approach for management of wounds from first assessment. Includes systems changes and training. Data has been collected for more than 500 wounds with many results around repositioning, equipment, risk assessments and referrals reporting results of 95% and higher.
- This CQUIN has seen many changes, primarily through a change in management, investigation and reporting of pressure ulcers at the Trust. The investigation and reporting element now sits in the Serious Incident (SI) team, a new mini root cause analysis tool has been developed to allow a robust approach which gleans the maximum information without the burden of a lengthy investigation process.

Forensic Secure Achievement 2014/15

Cardio Metabolic Assessment for Patients with Schizophrenia

- We are required to demonstrate through, the National Audit of Schizophrenia, full implementation of appropriate processes for assessing, documenting and acting on cardio metabolic risk factors in patients with schizophrenia. The audit sample must cover all relevant services provided.
- Our results must demonstrate that, for 90% of the patients audited, we have undertaken and assessment of each of six key cardio-metabolic parameters (per the “Lester Tool”) with the results recoded in patients notes as appropriate together with a record of associated interventions.
- This CQUIN was a Trust-wide national CQUIN which lost 100% of earnings due to low achievement levels in the audit. Analysis of the audit results in underway to determine areas for improvement, this remains a CQUIN for 2015/16.

Communication with GPs

- This requires completion of a programme of local audit of communication with patients’ GPs, focussing on patients on Care programme Approach (CPA), demonstrating by quarter 4 that, for 90% of patients audited, an up-to-date care plan has been shared with the GP, including International Classification of Diseases (ICD) codes for all primary and secondary mental and physical health diagnoses, medications prescribed and monitoring requirements, physical health condition and ongoing monitoring and treatment needs.
- To best respond to this CQUIN a review of current working practice was undertaken by senior nursing. From this a decision was made to develop a structured process for providing patients’ GPs with up to date information, four weeks after admission and then at regular twelve monthly intervals.
- To ensure this practice continues an audit tool has been devised that will audit on a quarterly basis from September 2014 that GPs have received a letter informing them of their patients care plan and International Classification of Diseases (ICD) 10 codes. To ensure this is embedded within the patient care pathway each individual ward area will implement this within their integrated care pathway. This will ensure the letter to the patient’s GP is sent four weeks after admission and
then on an annual basis in line with the Trust’s required annual physical health screen.

Friends and Family Test
- Implementation of the Friends and Family Test for staff and patients.
- Following discussions with the commissioners it was agreed that for quarter 1 Forensic Services would follow the general Trust approach whilst the development of a “Forensic specific” Friends and Family test (FFT) was completed. This has now been completed for both staff and service users and includes an easy read version of the survey.
- The uptake of the FFT questionnaires has varied across the wards. It has proved more difficult to engage patients with the questionnaire on the mental illness admission ward, this we hypothesize is in relation to acuity and the challenge of supporting patients in understanding how the questionnaire should be interpreted. On the wards which support more long stay patient populations the questionnaires have been better received.
- It is hoped that as the FFT questionnaire becomes more familiar across services there is an increase in the number of completed questionnaires received.

Collaborative Risk Assessments - Education
- The provision of an education training package for patients and qualified staff around collaborative risk assessment and management.
- In line with recommendations from the Department of Health (DH) best practice in managing risk guidelines document (2007) the service aim to provide a collaborative approach to risk and risk management incorporating the service user’s individual strengths within our approach to recovery.
- Individualised risk management plans have been developed within the framework of the My Shared Pathway document and will focus on a holistic approach to managing risk acknowledging the role of positive risk taking.
- By October 2014 service users had started the collaborative risk assessment, risk management programme utilising the My Shared Pathway document, outcomes of which will be presented within clinical reviews/ multidisciplinary team meetings.
- By March 2015, at least 90% of qualified clinical staff within the Humber Centre to have received training in collaborative risk assessment.
- By March 2015, all service users at the Humber Centre to have been offered relevant education and training, or if not clinically well enough details to be written within their care plans as to when training will be offered.

Supporting Carer Involvement
- This CQUIN requires providers to develop a strategy to engage and maintain relationships with carers where the service user has identified this as a choice.
- The CQUIN fits well with the service’s agenda to move forward in the use of information technology. While it will not be a problem-free process, they are confident that they will find the necessary ideas, solutions and opportunities to implement it to its optimum level and to give real benefit to patients, carers, clinicians and other professional involved on the journey to recovery.
- To date the service have developed a written strategy for engaging with carers to maintain good communication including telephone, face to face, written
communication and electronic formats (email) if appropriate, including regular carer satisfaction surveys and carer support.

Service User Formulation of Need at Key Points of Transition
- We are required to develop a system for sending a formulation to service users following acceptance into a service of what their current needs are and how these needs will be met. The three critical point of transition covered by this CQUIN are:
  o Initial admission into secure services
  o Transfer to a new provider
  o Transfer to a new level of security (whether up or down)
- Quarter 2 has seen significant development of this CQUIN following feedback on the quarter 1 submission. The letter template has been expanded to reflect different ‘My Shared Pathway’ outcome areas, amendments also made to ensure that key transition points are captured in integrated care pathway format. Audit tool also developed and shared for information.
- Quarter 3 has identified some issues in relation to the application of this CQUIN, which has been identified through the audit and a plan developed to ensure adherence to the agreed Needs Formulation template letter. This being said, 100% of admissions to the service within this quarter did receive a Needs Formulation letter.
- A further audit will take place towards the end of quarter 4 to ensure that all patients admitted to the service within that quarter have received a Needs Formulation, all of which have been completed based on the new template.

Specialised Services Quality Dashboard
- This CQUIN is aimed at ensuring that providers embed and routinely use the required clinical dashboards developed during 2013/14 for specialised services. The commissioner is responsible for agreeing the relevant dashboards with the providers.
- The dashboard is submitted to commissioners in line with requirements.
- The service continues to monitor the dashboard products in Secure Services Business Meetings for further discussion. The report is reviewed at the Business Meeting on a quarterly basis and is reviewed in line with the national results.
- Clinical Supervision and Safeguarding Training will continue to be areas of priority over the coming months. A service review is currently taking place; the outputs of this review will be shared in the next contract meeting

Prisons Achievement 2014/15

Friends and Family Test
During quarter 2 the Friends and Family Test (FFT) questionnaires began to be distributed by the various Humber NHS Foundation Trust Prison teams. The distribution process for the FFT questionnaires were selected by the individual prison teams due to the different service provision.

HMP Humber Primary Care Service - this service has received 13 completed FFT Questionnaires. Results:
• 50% of returned FFT questionnaires would recommend the service to friends and family.
• 100% of returned FFT questionnaires stated that they found staff to be friendly and helpful.

HMP Hull and Humber In-Reach Team - this service have not received any completed FFT Questionnaires to date.

HMP Wakefield Intermediate Care Team - this service has received 5 completed FFT Questionnaires. Results:
• 40% of returned FFT questionnaires would recommend the service to friends and family.
• 80% of returned FFT questionnaires stated that they found staff to be friendly and helpful.

Communication with GPs (Limited to those on Care Programme Approach)
• To best respond to this CQUIN a review of current working practice was undertaken by the multi-disciplinary team. From this a decision was made to develop a structured process for providing patients (prisoners) GP’s with up to date information.
• The Responsible Clinician supporting the In-reach teams and the In-reach team staff with in HMP Hull & HMP Humber agreed an approach for sharing information with Prisoners GP’s. An agreement was reached that a letter template should be developed to ensure GP’s are provided with relevant up to date information for all Prisoners who are under Care Programme Approach (CPA).
• Content of the letter template was agreed: International Classification of Diseases (ICD) 10 codes, medications, physical health conditions and on-going monitoring and treatment. Further discussions lead to the agreement that no sample would be used as the numbers of prisoners will be less than 100. All prisoners who met the criteria for a letter would have a letter sent.
• A further audit will be conducted in the early part of quarter 4 to track to ensure the proposed process has been implemented fully.

| MH2| Smoking Cessation in Secure Services   | This CQUIN directly helps to deliver against domain 1 of the NHS Outcomes Framework: preventing people from dying prematurely and consists of three separate streams:  
- Stream 1: Strategy to improve the “smoke free” status of the service.  
- Stream 2: Adherence to National Institute for Clinical Excellence (NICE) guidance PH48 for interventions whilst in secure services.  
- Stream 3: Supporting continued cessation while on leave from the hospital and following discharge / transfer.                                                                                                                                                                                      | Tbc  | Marie Thompson / Aaron Mauracheea Service leads to be confirmed             |

The Specialised Mental Health CQUIN indicators for 2015/16 are shown above but until publication of the CQUIN guidance and National Tariff, these are issued as draft and may be subject to change.
