# If you are injecting

- **Avoid injecting in or near a wound**, this can make it worse.
- **Keep your wound (and injecting sites) clean**: washing with soap and water is best. Unperfumed wipes are okay – don't re-use them (one swipe per wipe!). Cotton wool is not good: it can leave fibres in the wound.
- **Avoid touching the area**. If you need to, wash hands before and after.
- **Look out for signs of infection** such as pus, red/hot skin, feeling unwell (high temperature, shivery etc).
- **If the wound is infected, or getting worse you might need antibiotics**: show a pharmacist, someone at your local drug treatment or health care service for advice.
- **Always bring back your used works**. It is free to safely return your used injecting equipment in the sharps container provided when picking up new works.
- **Ask a the pharmacist** for information and confidential advice.

# Pharmacies offering needle exchange
